

**Safeguard your systems from former employees and contractors**

### IMMEDIATELY REVOKE ACCESS WITHOUT LOSING ACCOUNTS OR DATA

Are you at risk from former insiders? Fischer **Access Termination** defends organizations from security breaches by former employees and contractors with a very simple and cost-effective way to terminate access to customer data, financial information and other sensitive corporate assets.

In just a few clicks, you can immediately reduce your risk of “orphan” accounts from hackers and former insiders. Orphan accounts enabled an insider at Société Générale to create a €4.7 billion loss.

### Solve These Business Issues Within Days

Organizations incur millions in losses simply because they failed to remove a former insider’s access to IT accounts. Most organizations have lost track of some accounts so that when a user leaves the organization, some accounts can remain accessible to the former insiders or to others who have learned the account credentials. **There is usually no way to track who is using these “orphan” accounts. For example, orphan accounts enabled an insider at Société Générale to create a €4.7 billion loss (more than \$6,000,000,000 USD).**

#### ➤ Data Security Problems

- “Orphan” accounts can be targeted by hackers: user accounts often remain active after employee termination
- Security risks: “back doors” can allow access to sensitive assets even after network access has been removed
- “Back doors” can allow access to sensitive assets even after VPN access has been removed
- Cannot trace who accesses orphan accounts: insiders can learn the credentials of departing employees and contractors

#### ➤ Employee & Contractor Offboarding

- Increased costs, errors and delays: unnecessary user administration
- Insufficient controls: inadequate process to assure account revocation

#### ➤ Compliance & Audit

- Inability to prove enforcement: insufficient history maintained to prove all accounts have been terminated
- Expensive, disruptive audit preparation: difficult to determine orphan accounts

### Strategic Advantages

**Avoid financial and reputational damage of a security breach**

**Improve security of IT assets**

**Safeguard access to sensitive corporate and personal data**

**Reduce the costs of compliance and administration**

**Mitigate risk of inappropriate access to resources**

**Maintain full audit history as accounts can be disabled without deletion**

**Prove compliance with regulations: only authorized persons can access accounts of former employees and contractors**

# Fischer Identity™

## Turn Identity Management into a Strategic Advantage

### ACCESS TERMINATION FOR ALL SYSTEM & APPLICATION ACCOUNTS

Access Termination includes an administrative interface for quickly disabling all associated IT accounts across multiple systems when a user departs your organization. All user accounts are tracked, which reduces security risks and helps to eliminate paying for unused software licenses. "Intelligent" termination of access ensures that all accounts and data remain intact and audit records are automatically created: you'll always have the proof you need to respond to auditors' questions.

Access Termination provides a good starting point for mitigating risk from former insiders. Other, more sophisticated modules such as the **Self-Service Portal** or **Automated Role & Account Management** additionally enable secure onboarding and ongoing management of business resources.

- **Prevent security breaches from former insiders**
- **Immediately terminate access without destroying any data or audit records of actions performed by former users**
- **Prevent orphan accounts: ensure that no accounts are overlooked during the offboarding process**
- **Provide audit history of access termination for former employees and contractors**
- **Reduce help desk workload and costs**

### Finally, Identity Management for any-sized organization and any procurement model

- **Traditional on-premise**
- **SaaS**
- **Hosted**
- **Remotely Managed**

**Fischer:  
Trusted Data Security  
for More Than 25 Years**

#### For more information

Fischer Identity removes the complexity of identity management to enable organizations to focus on automating and managing business processes instead of technology.
