

Secure, Single Sign-On Access to Resources Across Internal and External User Communities

Are your business units pleading for SSO to SaaS and web-based applications, but your IT staff can't spare months to learn and implement another application? Are you delaying SaaS initiatives due to concerns about management cost and security?

Fischer Federated SSO Service simplifies access to SaaS and Web applications. It is cost-effectively delivered as a secure SaaS application that implements and manages your federations so your people can stay focused on higher-value activities and it eliminates the need to send protected user information or passwords into the cloud.

Federated and Single Sign-On the Easy Way

Virtually every organization leverages Software as a Service (SaaS) and other Web-based applications: Google Apps®, Salesforce.com, WebEx, Cloud Application Stacks, etc. Yet some of the savings and efficiencies derived from such applications are eroded due to wasted time and user frustration to perform repetitive log-in activities, and calling the help desk to reset forgotten passwords.

Fischer's Federated Single Sign-on Service eliminates multiple log-ins to SaaS and Web applications by authenticating the user against your preferred user repository, then sending only the identity attributes you authorize to the remote campus/organization to automatically authenticate the user and control privileges without requiring a manual log-in.

When combined with other Fischer Identity capabilities, organizations can also:

- **Automatically revoke access to external Web and SaaS applications in addition to on-premise applications**
- **Enable users to have one password for both internal and external resources**
- **Audit and report who can access SaaS and other external applications**

Solve These Business Issues In Days!

- ↳ Lack of expertise to deploy and support federation
- ↳ Control access to SaaS and partner applications
- ↳ Protect personal information from SaaS providers
- ↳ Users frustrated by managing passwords for each application

Strategic Advantages

- Quickly begin collaborating with business partners
- No need to dedicate skilled resources for federation
- Reduce risk and improve security
- Improve SOX and HIPAA compliance
- Reduce costs of managing identities
- Increase user productivity
- Improve the end user experience and satisfaction

Fischer Identity™

Turn Identity Management into a Strategic Advantage

Manage Federation For SaaS and Web Applications

Avoid the need for federation staffing and expertise: Focus on what's most important for your institution without the distraction of implementing and managing another solution.

- **Provide SSO for federated and Web applications**
- **Protect user privacy as required in HIPAA and European Privacy laws**
- **Report on federation-related activities: federations, user access attempts, etc.**
- **Have Fischer do the heavy lifting. Fischer manages the federation solution in a highly-available and scalable environment:**
 - *Setup and manage hardware and software infrastructure*
 - *Install and configure SAML / Shibboleth*
 - *Configure your federations*

Complete End-to-End Identity Administration

Fischer Identity delivers synergies with Fischer Federated Single Sign-On: automated user-specific account creation/revocation, orphan account detection and remediation, identity compliance, recertification, password reset, separation of duties, self-service access requests, secure distribution of accounts to remote users and more:

- **Self-service and event-based provisioning and deprovisioning for federated and other resources**
- **Secure self-registration by external users such as contractors and guests**
- **Enforce policies for accessing, approving and recertifying federated and other privileges**

Finally, Identity Management for any-sized organization and any procurement model

- **Traditional on-premise**
- **SaaS**
- **Hosted**
- **Remotely Managed**

**Fischer:
Trusted Data Security
for More Than 25 Years**

Built for Business... Yours™
