

Fischer Identity Suite™

Built for Business...Yours™

Finally,

Identity Management that Works as Advertised.

Secure

Predictable

Low-Cost

Simple

Are you overwhelmed with securing access to corporate assets and managing compliance, but are leery of the high costs, delays, and failures of conventional identity management (IdM) products? Have you already deployed an IdM product and now realize the limitations caused by **product inflexibility and complexity**?

Fischer Identity Suite™ works as advertised. We combine the security, compliance, risk management, and business efficiency benefits of identity management with the low cost, predictability, and ease of change enabled by Fischer's patent-pending identity platform. Within days, you can begin to audit and control access to resources, enable users to reset their forgotten passwords, enforce compliance policies, generate compliance reports for auditors, and more – all without the massive cost, specialized staff, and multi-year delay you'd expect with a conventional identity management product.

Simple is Good

Fischer Identity Suite™ is known world-wide for its flexibility, extensibility, scalability, and... *simplicity*. Complexity is a primary cause of IdM project delays, cost over-runs, and failures. Fischer protects your investment by making identity management simple to deploy, operate, and use. We've incorporated innovations that remove complexity, including an interoperability engine to quickly integrate identity information across on- and off-premise systems, the elimination of programming and its associated cost and error, and pre-built, quality-tested identity components (e.g., workflows, policies, etc.) that work out-of-the-box yet can be easily extended to support your precise needs – no matter how intricate.

Fischer Identity Suite™ contains the following core identity capabilities

We have flexible pricing and right-sizing choices to tailor a solution to your meet your specific business needs and budget:

Password Management

Cut your password-reset and help desk costs while keeping users productive by allowing them to quickly reset their forgotten passwords. Strengthen security by automatically enforcing password policies while reducing the number of passwords to remember.

Provisioning (Role & Account Management)

Create a streamlined, auditable process for providing and removing access to IT and physical assets based on real-time business events (e.g., hire, termination, promotion) and self-service requests – all in compliance with your business roles and security policies.

High Privilege Account Management

Avoid security breaches, fraud, and compliance violations resulting from uncontrolled access to Administrative, Super User, Root, and other privileged accounts.

Compliance, Audit & Reporting

Speed and simplify audits with an automated user access control framework for complying with Sarbanes-Oxley, HIPAA, Gramm-Leach-Bliley, FERC, and other regulations. Prove Separation of Duties, identify/remediate policy violations, and quickly create reports for auditors.

Fischer Identity Suite™

Built for Business...Yours™

To trust your identity solution, you need to first trust your identity solution vendor

Identity Management that Breaks Tradition

- Creates immediate value
- Generates rapid ROI
- Provides predictable results in days, not months
- "Do more with less": improve business process efficiency, security, compliance, and workforce effectiveness while reducing operating costs
- Adapts to changes in your enterprise quickly and easily
- Conforms to your business processes without costly customizations
- Securely spans across disparate systems, domains, and enterprises
- Scales to support millions of users
- Avoid hiring specialized resources to implement, manage and support
- Manage as a centralized or delegated solution
- Migrate between perpetual on-premise and outsourced models if needs change

Fischer has been a leader in the enterprise security market since 1982, with scores of innovations and first-to-market products, including the first:
